I.I. Content management

Content ? (内容)

DT时代的到来

2014年，马云对全体员工发了一封内部邮件。在邮件中，马云提出“以控制为出发点的IT时代正在走向激活生产力为目的的DT(data technology)数据时代”。

Content

Content

Information

Data

Content Management

- Information
 - creation, representation and exchanging
- Information media (信息载体, 石刻, 竹简, 羊皮纸, 雕塑, 建筑 ...)
 - collection, organization and storage
- 古老的行业

Content Management

- Examples:
 - Ancient years: Literature in Libraries and Archives
(档案馆)
 - From 19th century: Continuous Media (连续媒体), movie, audio ...
 - After 1980's: Digital Media (数字媒体), digitalized ~

Content Management

- process, store and transfer (data) content
- Key: non-linear creation
- Media industry:
fusion between traditional company (news paper, broad casting, entertainment) and modern company (google, sina, apple, facebook)
- Non-Media industry:
data and documents in big companies, education units, research units, museums

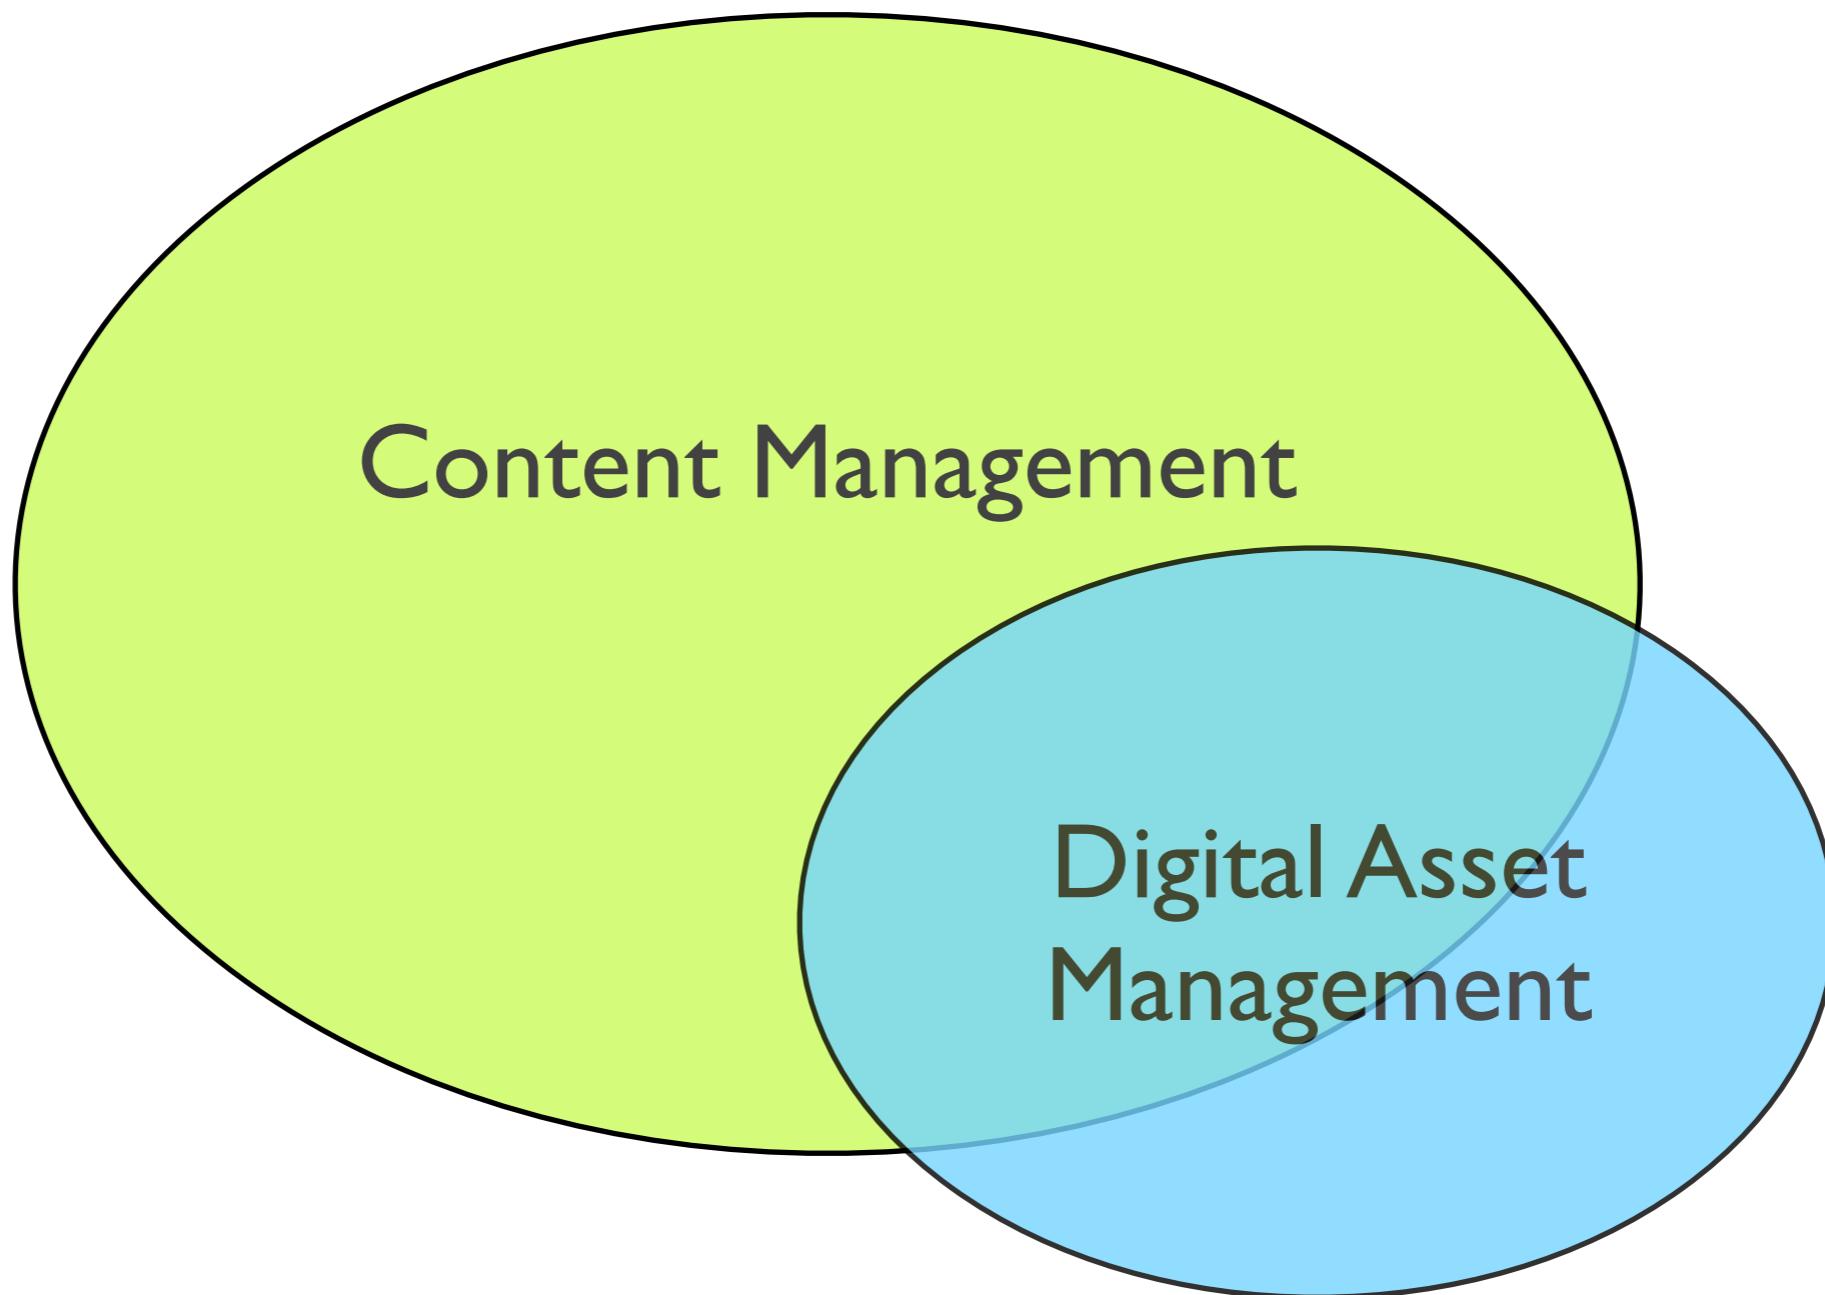

信息 / 内容的银行？

- 保险柜？
- 交易平台？
- . . . ?

Typical CMS

- Website of a research unit
- Personal blog
- Wiki

Digital Asset Management

What is Digital Asset Management?

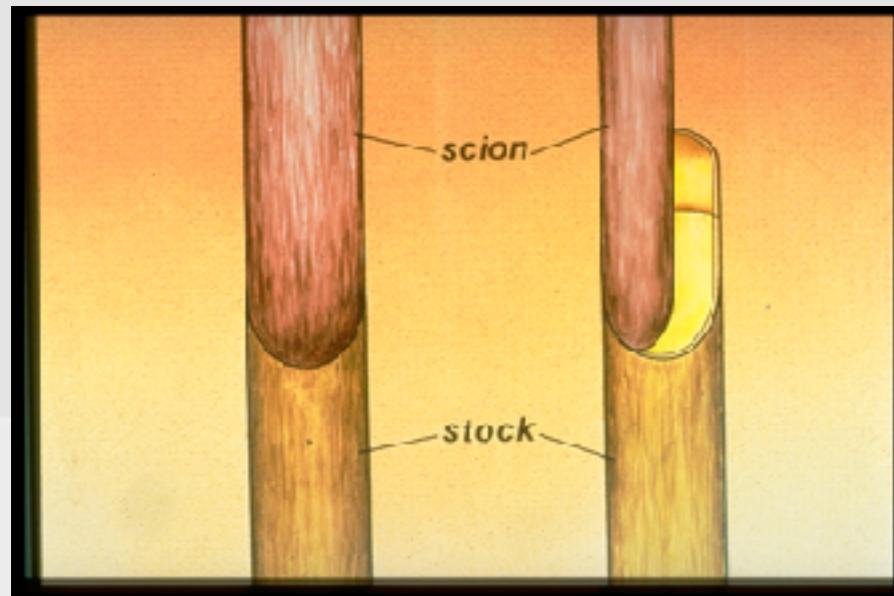

- Tools for organizing, storing and retrieving content in digital format
 - downloading, renaming, backing up, rating, grouping, archiving, optimizing, maintaining, thinning, and exporting ...
- Includes:
 - text, video, images, movies, sound, and 3D content

Content Management and DAM

- “**It’s just another binary file type**” is a superficial response
 - But so is, “**It’s just managing brand assets**”
 - Digital Asset Management involves
 - Much higher **storage volumes**
 - More complex **ownership** and **usage rights**
 - More **complex content** (layers)
 - However, an organization needs a **unified content management/digital asset management strategy** to avoid unnecessary costs in hardware, licensing, software development and support

Layering

Technique by which adventitious roots are caused to form on a stem while it is still attached to the parent plant. It is then detached to become a new plant.

End-affecting layering

1. Trunk - still connected to parent plant. In some respects is similar to grafting - yet association of C/H/O on a point of breaking.
2. Stress avoidance - it is not detached from parent plant. Better water relations. Less leaf movement and browning on plants that take long time to root.
3. Light exclusion - similar to blanching in tip layering. Isolation in trench layering.

Main uses of layering

1. for plants that propagate this way naturally such as raspberries, blackberries.
2. Plants which are difficult to propagate other ways - such as cuttings but which are valuable enough to do this since it is a labor-intensive method. Mangos air layering, fibrous-simple-layering, muscadine grapes - compound layering.
3. for producing a large sized plant in a relatively short time. For many foliage plants.
4. for production when there are minimum propagation facilities.

Types of layering

1. Tip-layering - In late summer starts to happen naturally. tip changes appearance. Elongated with small curved leaves. Bury this end and root tip recurves upward to produce a sharp bend in stem from which roots develop.

2. Air-layering - A piece of bark is removed from a stem and a wound is sealed with a protective covering. This stimulates the formation of roots. When these are well developed, the stem is cut off and the new plant is potted up.

Text

Nutrient Media

Nutrient Media

Nutrient media for plant tissue culture are designed to enable explants to grow in a totally artificial environment. It enables stable plants to grow in vitro, whereas home derived nutrient media fail to provide the nutrients readily available in soil. In addition to mineral elements which make up the macro- and microelements present in fertilizer, nutrient media also contain organic compounds such as vitamins, plant growth regulators, and a carbon source.

Mineral elements

One of the most successful media, devised by Murashige and Skoog (Murashige and Skoog, 1962) was formulated by analysing the inorganic components in tobacco plant tissue adding them to media in amounts similar to those found in the plants. Notably did they find that the ions themselves were important, but the form in which the ions were supplied was critical as well.

Macronutrients

Macronutrients consist of N, K, P, Ca, Mg and S.

Nitrogen (N) Nitrogen is required for general growth and is essential to plant life. Most inorganic nitrogen is converted to amino acids and then to proteins. The two most widely used forms of inorganic nitrogen used in plant nutrient media are the nitrate ion (NO_3^- oxidized) and the ammonium ion (NH_4^+ reduced) which are added as inorganic salts. Nitrate is usually added at concentrations between 25 and 40 μM and ammonium between 2 and 20 μM . In poor nutrient media, use of both forms helps maintain pH. Many plants appear to grow best if given both forms, although the reason for this is not known. In certain media, both the total amount of nitrogen as well as the relative amounts of NO_3^- and NH_4^+ are important. When the ammonium ion is used alone it may be toxic. Inorganic nitrogen priority ranges from 25–40 mM in nutrient media. Nitrogen may also be added as an organic form as amino acids, hydrolysates (such as amino hydrolysate) and organic acids.

The organic forms of nitrogen such as amino acids are often useful when added to media that do not contain ammonium. One advantage of using organic nitrogen is that it is slowly released, the form in which most amino acids in the plant and tissue may be taken up more readily than inorganic nitrogen. Organic forms of nitrogen cannot, however, totally replace inorganic forms. One danger of using amino acids is that there TOO MUCH can be added in which case feedback inhibition can occur. Biochemically the critisic sense therefore is a great deal of specific amino acid and consequently change the metabolic pathways or interfere with production of the amino acids. This results in the production (or blocking up) intermediate compounds which in turn may disrupt normal metabolism.

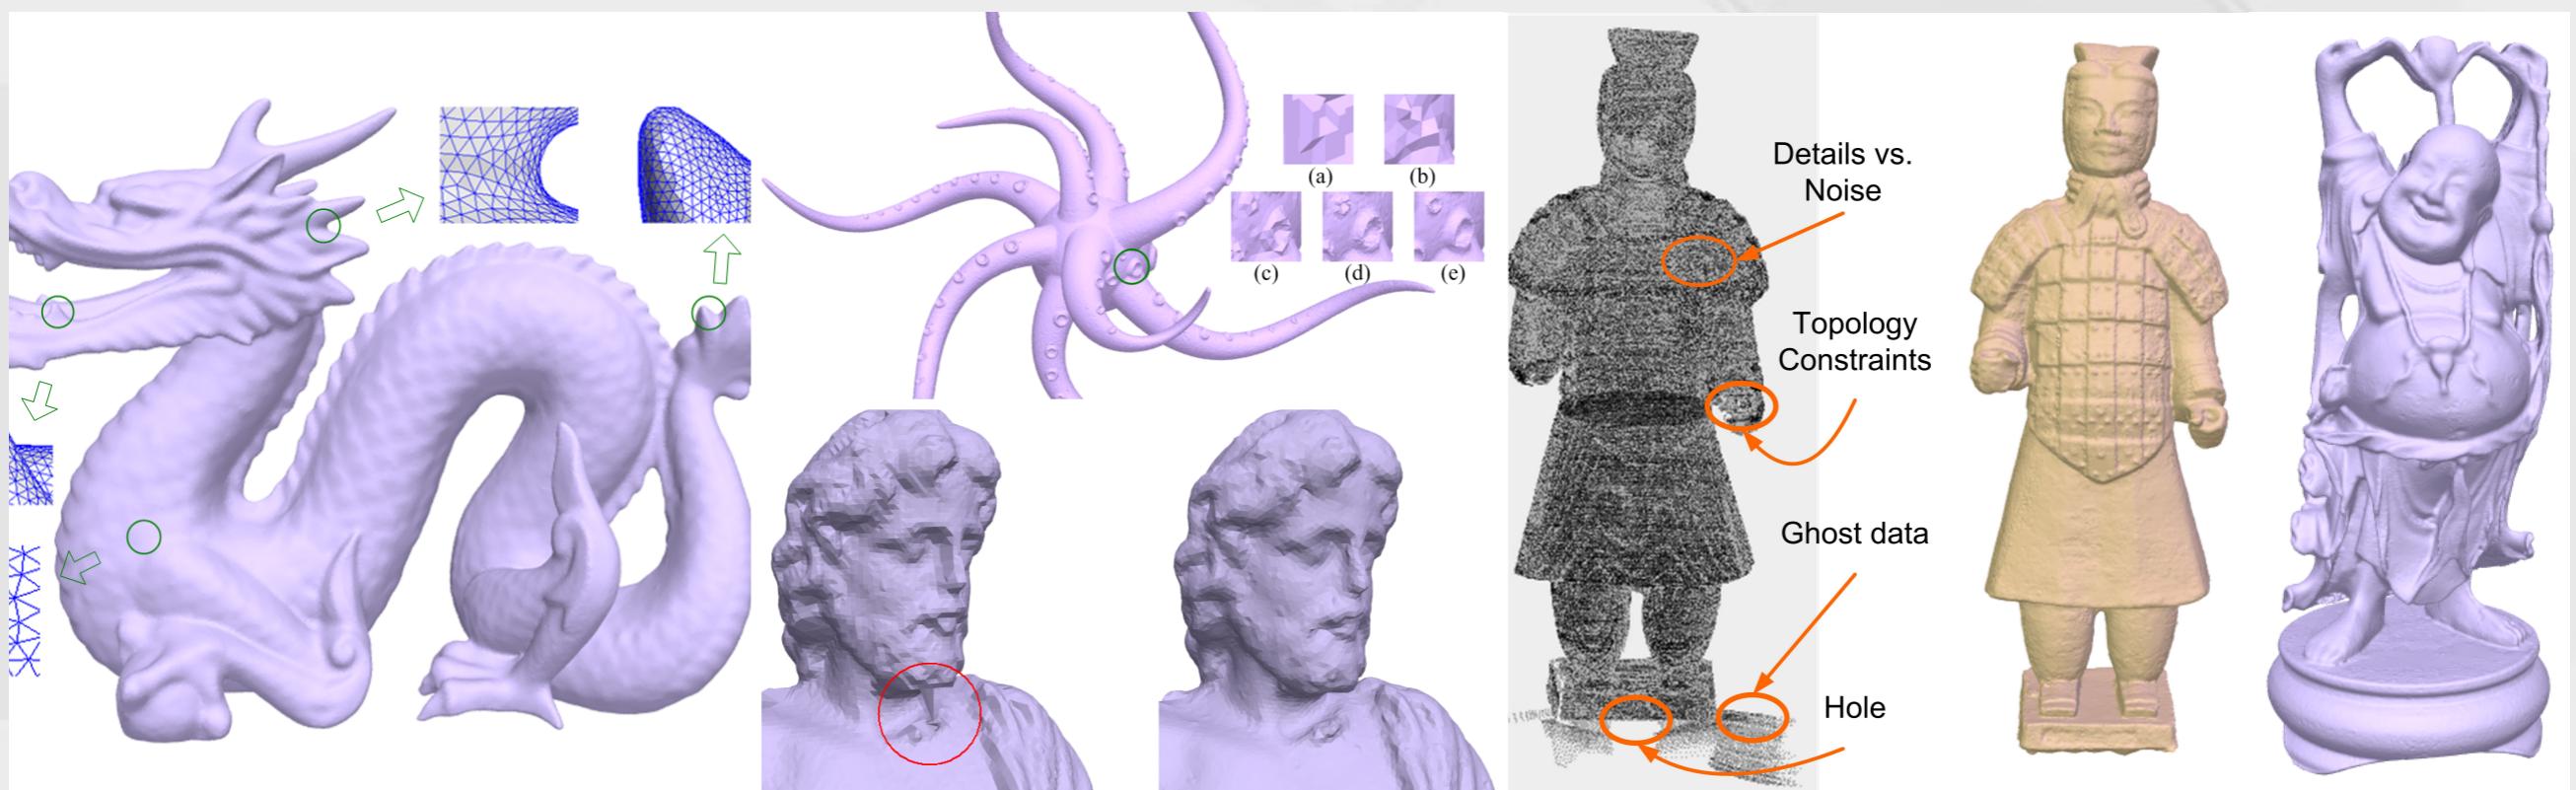

The form of nitrogen is often critical depending on the kind of culture. There is a difference in the oxidized and reduced forms. The reduced form of nitrogen is the ammonium (NH_4^+) and the oxidized (NO_3^-). The form of nitrogen affects the pH. When both forms of N are used there is a rapid uptake of ammonium (the more readily available form since it is reduced) which results in a decrease in pH (to about 4.4). At low pH all the uptake of nitrate is performed and thus the pH rises. Nitrate is used in addition to ammonium because the ammonium ion is excess is usually toxic. Also pH would be much more difficult to control with just ammonium.

Content

- Essence (素材) + Metadata (元数据)
- Intellectual Property Rights (IPR, 知识产权)
- Digital Right Management (DRM, 数字版权保护)

Why Do We Need DAM?

- Average creative person looks for a media file 83 times per week
- Fails to find it 35% of the time
- DAM reduces failure to 5%

Digital assets are not
simple bits.

What Can DAM Do for You ?

- Catalog large numbers of formats
- Create a visual category using thumbnails
- Add keywords, data fields
- All fields can be searched
- Select images for an electronic gallery - specific lecture topics
- Share over the internet

DAM Example: Picasa

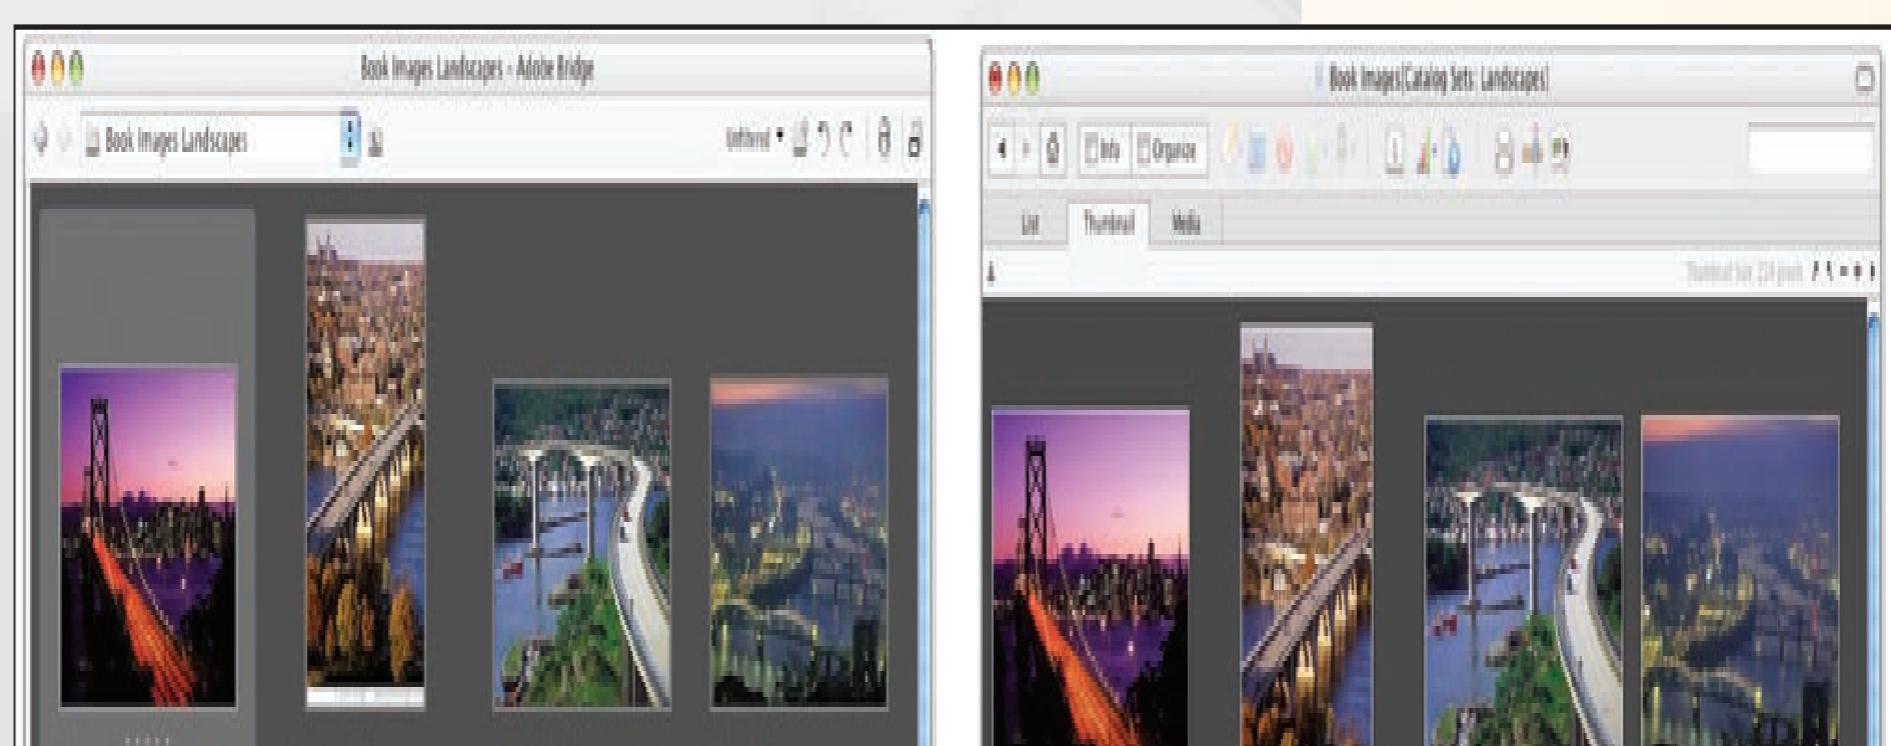

Photo Management: Client Software + Web Service

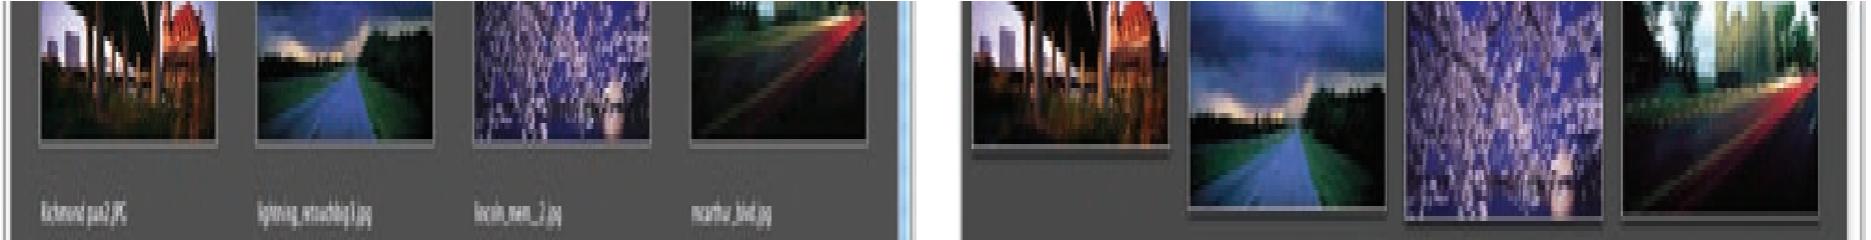

Rules of sound DAM

- Systematize
- Don't rely on your memory
- Be comprehensive
- Build for the future
- Do it once...
- But don't overdo it

Browsers v.s. cataloging

- DAM faster
- allows user to have virtual sets.
- knows where stuff is supposed to be.
- allows faster backup of important sorting work.
- allows you to work with offline images.

Browsers v.s. cataloging

- Browsers:
 - Photoshop Bridge
- Cataloging software
 - Google Picasa
 - ACDSee

Solutions

From most extensive and expensive to least financially damaging

- Enterprise solutions
 - \$35,000 + (can be in millions)
- Middle tier - interdepartmental
 - \$3,000 - \$5,000 +
- Desktop level
 - \$100-500 + (depending on server requirements)
- Future, SaaS (cloud) solution
 - free or very low price

Desktop Solutions

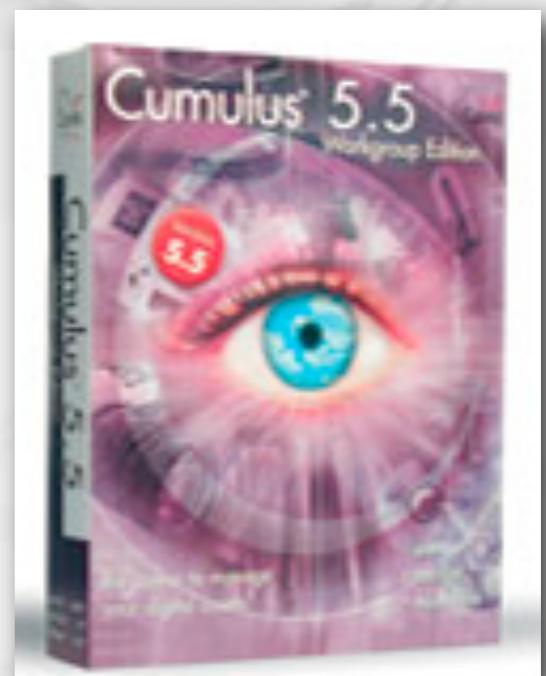

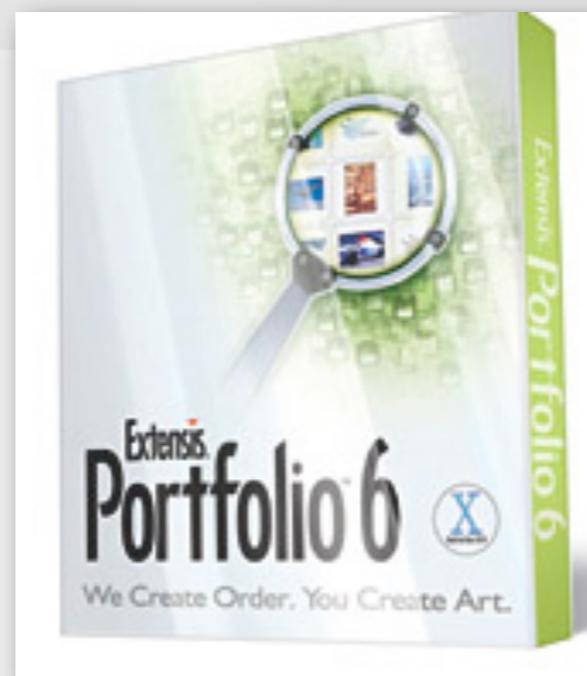

iView Media Pro™

Experience the Pro difference. [iView MediaPro](#) is essential for creative professionals who need to organize, view, annotate, print, backup and repurpose media, as well as automate their workflow.

I.2. Industrial Analysis

DAM: Past and Present

- Digital Asset Management initially established **Niche Markets**, including
 - Publishing, Media and Entertainment
 - Broadcasting – Media Asset Management
 - etc.

DAM: Past and Present

- Now on the Verge of **Going Mainstream**
 - Integration into
 - Enterprise Content Management and
 - Document Management Strategies
 - Cross Industry
 - Financial Services, Pharmaceuticals, Consumer Packaged Goods, etc.
 - Mainstream Vendors

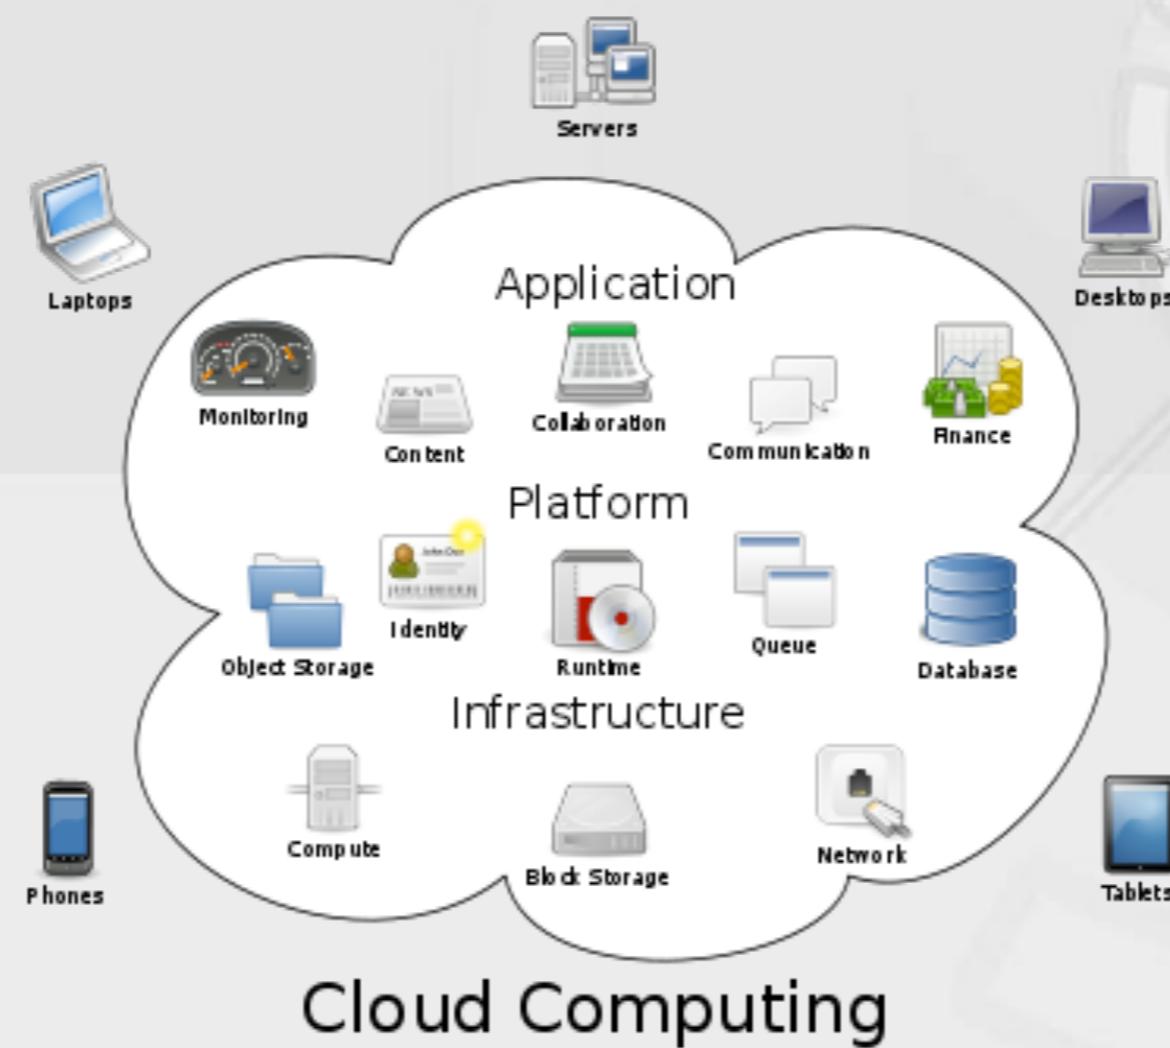

DAM: Past and Present

- 淘宝电子书 <http://ebook.taobao.com/>

The screenshot shows the homepage of the Taobao Ebook website (<http://ebook.taobao.com/>). The header features the site logo '淘宝电子书' and 'ebook.taobao.com'. A search bar contains the query '明朝那些事儿'. Below the header is a navigation bar with links: 首页, 主题馆, 免费读书, 女性生活, 财经励志, 小说人文, 网络原创, 客户端下载 (with a 'new' badge), 电子书购物车, 我的书架, and 储值卡. A banner at the top promotes the slogan '指尖上的阅读 给你好看' (Reading at your fingertips, it's good to look at). On the left, there's a sidebar for '电子书分类' (Ebook Categories) with sections for 生活时尚 (Lifestyle & Fashion), 母婴育儿 (Maternity & Childcare), 养生保健 (Healthcare), and 职场励志 (Career Motivation). The main content area features a large banner for the 'Taobao Reading' app ('淘宝读书') for iPhone/iPad, with promotional text '亲,你久等了!' (Hello, you've been waiting for us!), 'For iPhone/iPad 客户端发布了' (The client for iPhone/iPad has been released), and '5折让利' (50% discount). Below this are several smaller promotional boxes for different categories like '少年天天向上' (Teenagers, move forward every day), '梅子黄时雨 白落梅 庄雅婷' (Poetry by Bai Luomei and Zhuang Yuting), and '胆小慎入' (Caution, timid souls!). The right side of the page includes a sidebar for '逛书' (Browse books) with links for '女性生活' (Women's Life), '小说人文' (Fiction & Humanities), '财经励志' (Finance & Motivation), '网络原创' (Network Original), and 'TOP ↑'. At the bottom, there are links for '一键购书' (One-click purchase), '储值卡优惠充值>>', and '支付宝' (Alipay).

Digital Asset Management – Case Study

Case Study #1: Music Publishing

- Apple (iTunes)
- Leading music publishing firm
 - own millions song copyrights and supports 100 countries and territories
- Client needed a means to further maximize and manage the value of the song copyrights that it owns through promotion, licensing and royalty processing
- Client decided to turn all their internal processes and data outward, making them available to business partners and associates everywhere, at all time

Case Study #1: Music Publishing

- Key technical aspect was integration of numerous IT systems including several territorial:
 - databases, search, application server/portal
 - not just simply a packaged DAM system deployment
- Outcome was the world's largest digital rights management (**DRM**) system

Case Study #1: Music Publishing

- Apple's iTunes (data 2011)
 - > 8,500,000,000 music sale
- > 84,000,000 iPad
- > 13,000,000 iPhone
- > 350,000,000 iPod
- > 400,000,000 iOS devices
- > 435,000,000 iTunes users

Case Study #2: Cable Television

- Leading cable television network: multiple premium channels/multiple multiplex channels
- Client needed more effective means to provide affiliates access to digital assets: marketing materials, programming information, ads, etc.
- Client also needed ability to request print materials and to order services (e-commerce transactional back-end integration)
- Client required a single 3rd party system integrator that could:
 - Span technologies: Digital Asset Management, Content Management, Application Server, Portal
 - Span core competencies: Creative Design, Back-end Integration, etc.
 - Take over where a previous 3rd party systems integrator left off

Case Study #2: Cable Television

- Google TV:Android based
- Apple TV? IOS based ...

Case Study #3:A Digital Asset Management System at **University of Michigan**?

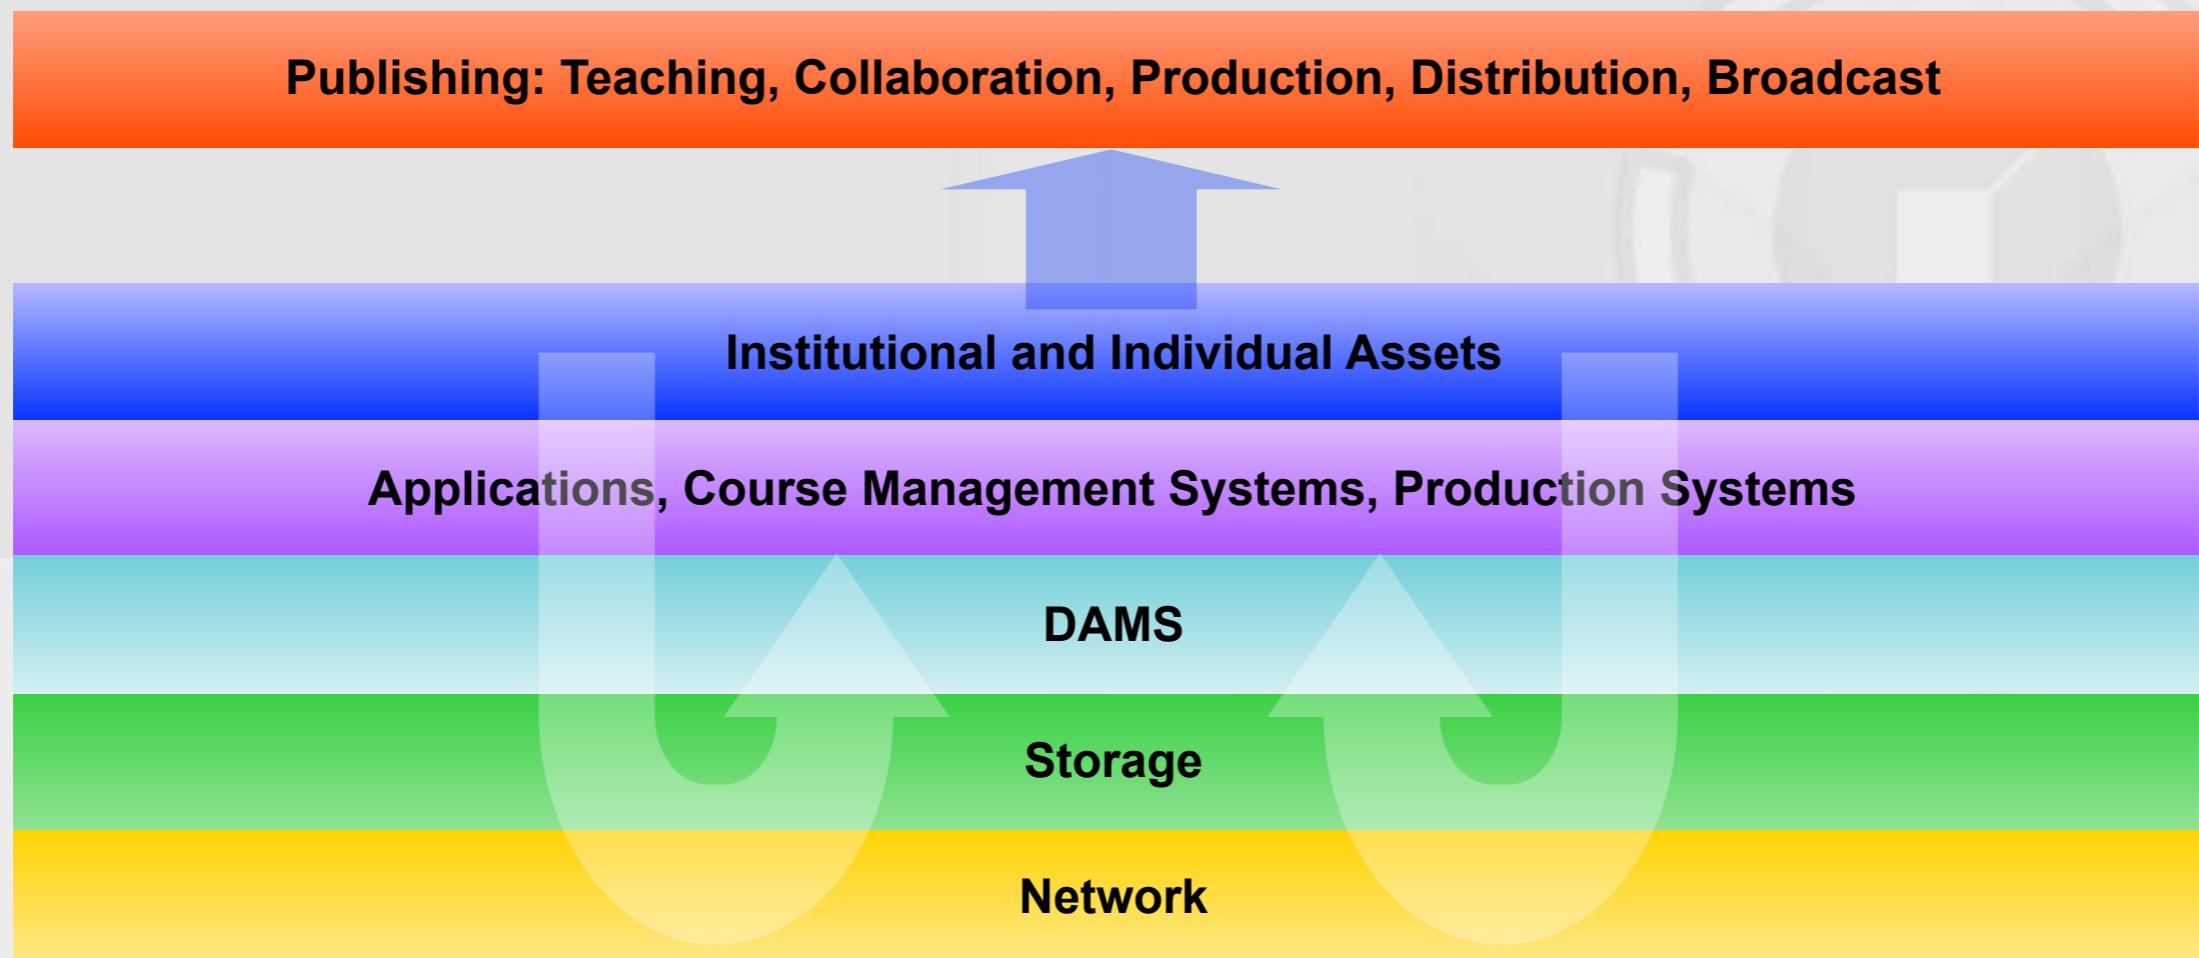

- Create a robust infrastructure to ingest (获取), manage, store and publish digital rich-media (富媒体) assets and their associated metadata.
- Streamline the “workflow” required to create new works with digital rich-media assets.
- Build an environment where assets are easily searched, shared, edited and repurposed in the academic model.
- Provide a campus-wide platform for future application of rights declaration techniques (or other IP tools) to existing assets.

Orientation of DAMS at the UM

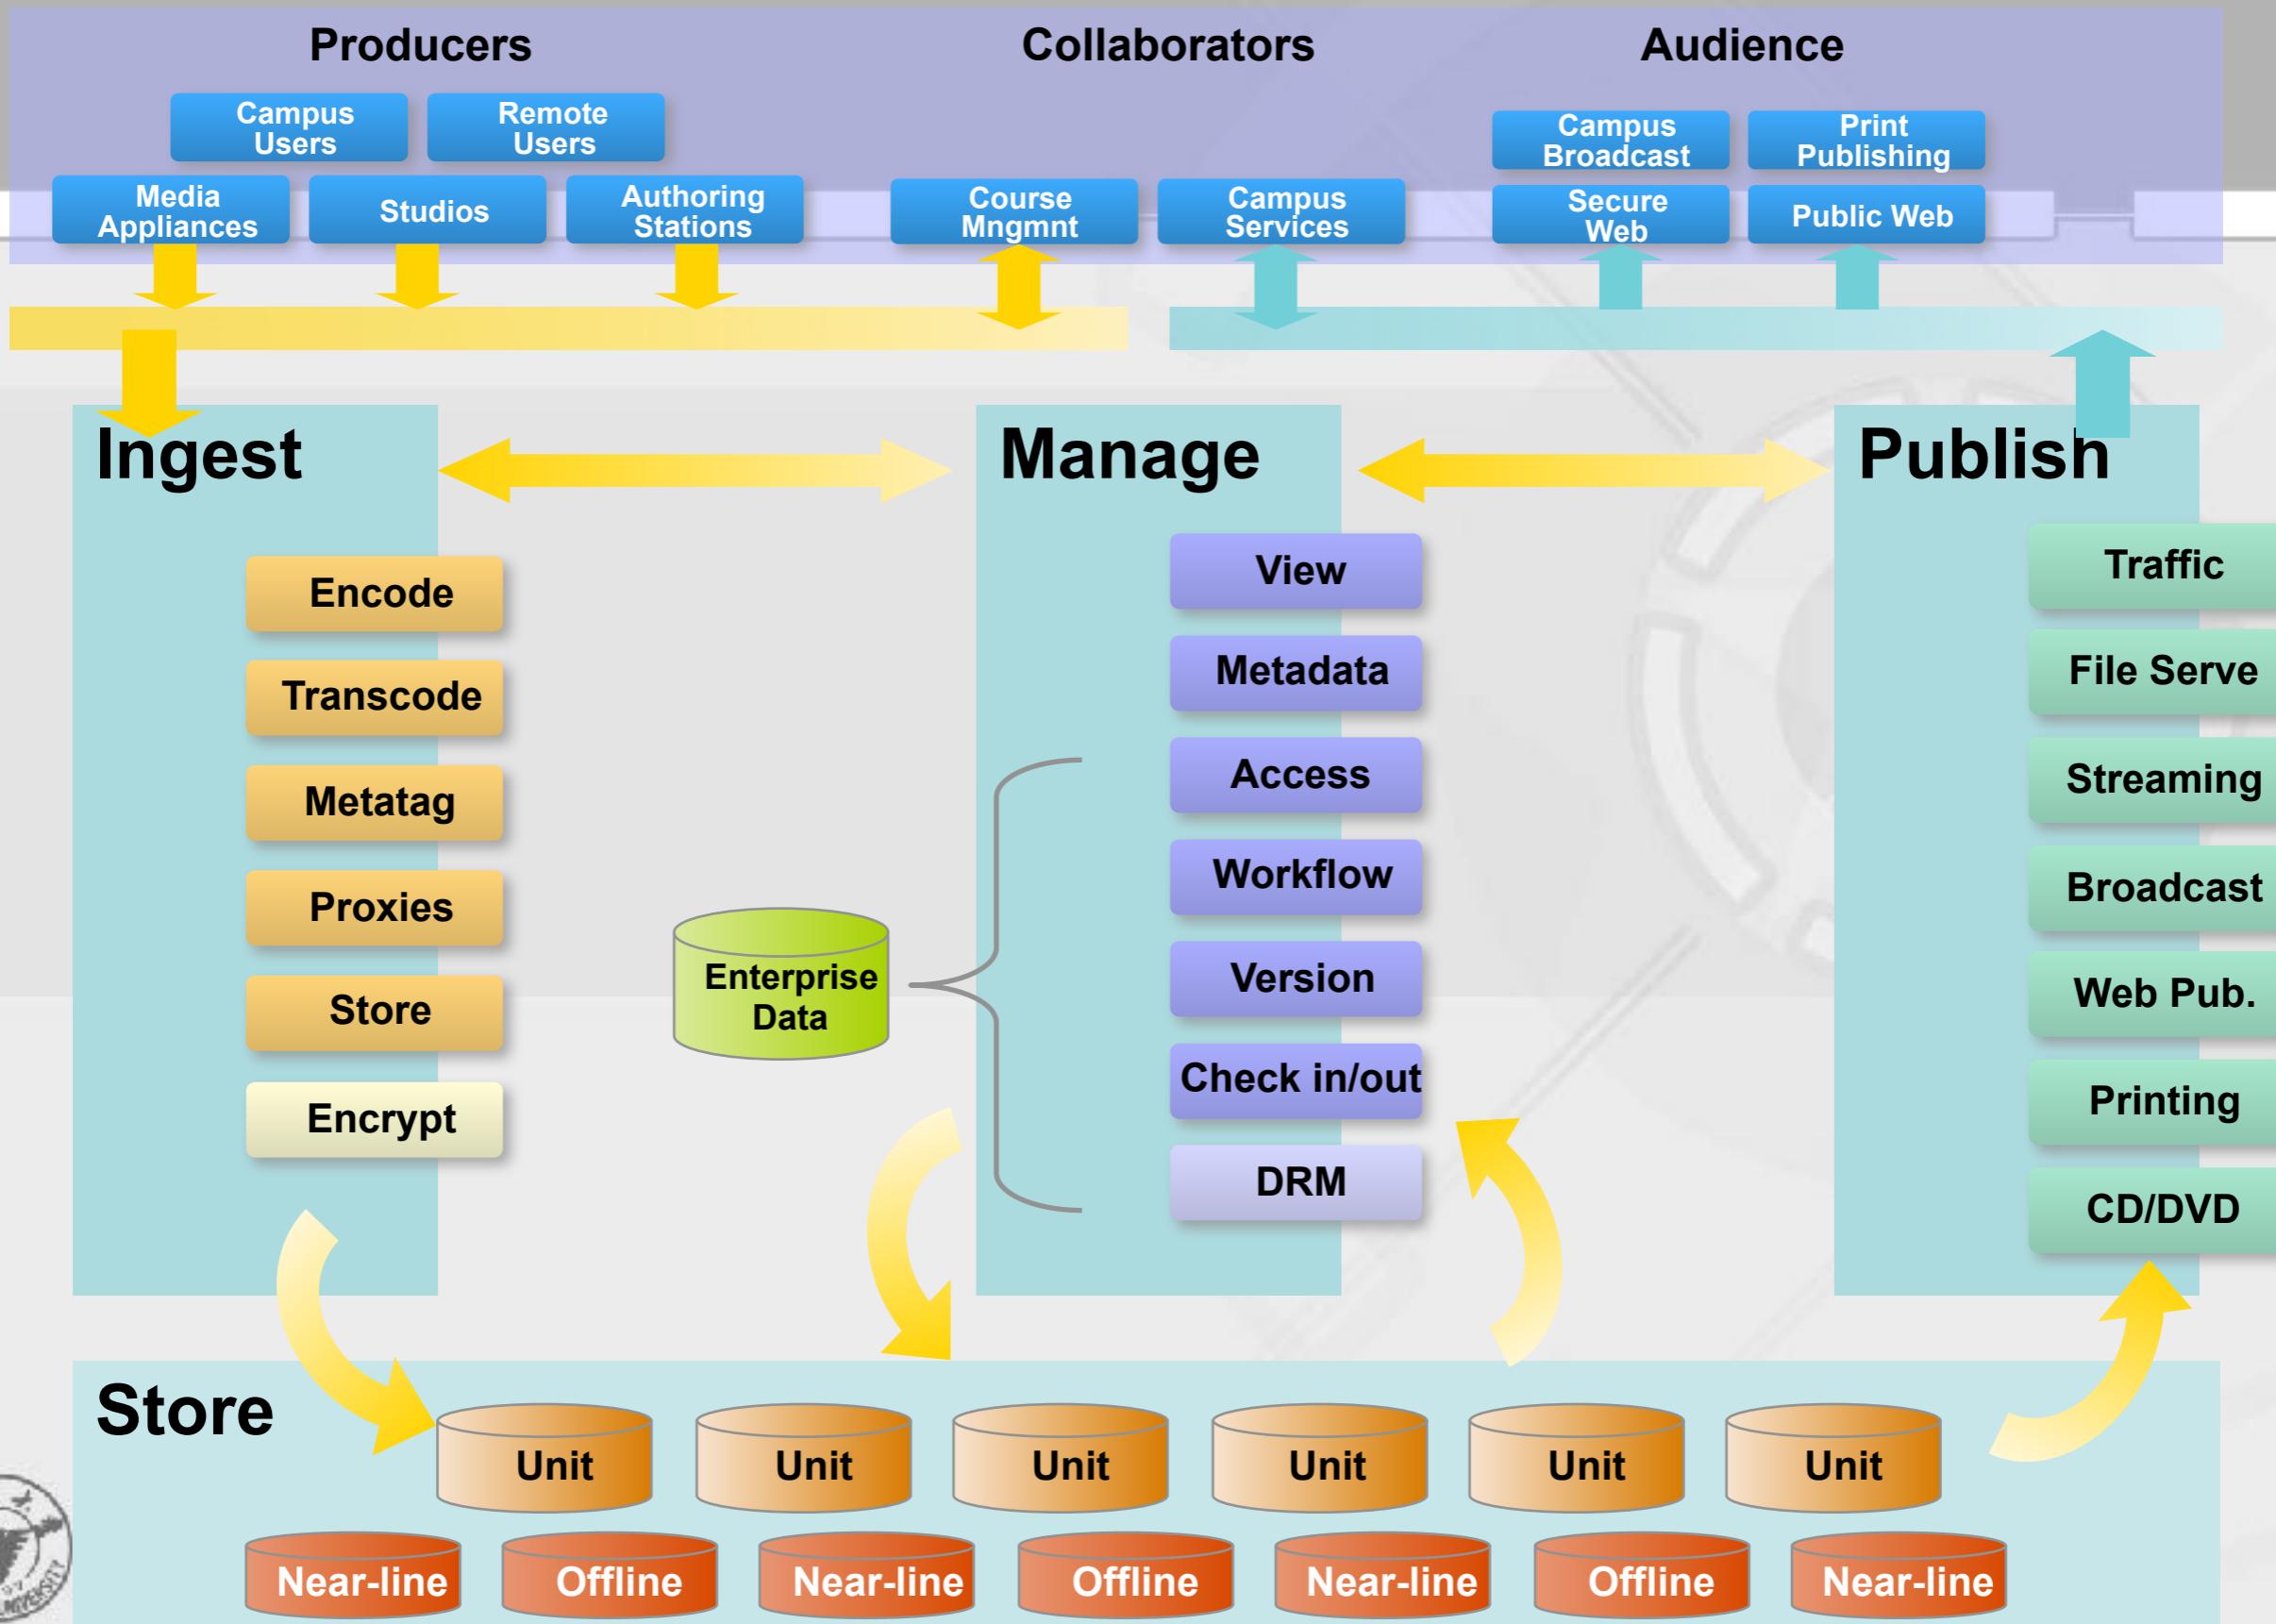

- Infrastructure level
- Tuned for rich media (time-based)
 - video
 - audio
 - 3D VR modeling and animation
- Capability for non time-based data (text, numerical data, still images)
- Metadata collection and management: automated or semi-automated
- Campus-wide availability
- Not primarily a content management tool nor production tool
- Coordinate with planned campus storage management practice
- Distributed management (authorization, roles, access lists)
- Integrated with centralized campus data services
- Plan for digital rights-declaration/management services

What is the place of DAMS in the campus infrastructure?

DAMS Component Services

DAMS Living Lab Configuration
